

Transportation Toll Collection System

DTI has deployed Intel® Pentium® 4 processor based single board computers to the leading service provider of toll collection systems that collects 70% of U.S. toll revenues. Managing nearly 4000 lanes worldwide, and the evolution of technology from manual to automatic coin machines to electronic toll collection, dependability and salability are critical in such applications. Operating in a sealed environment, DTI's single board computer, the **LBC9216**, has excelled under intense thermal conditions.
