

C2 Tactical Command and Control System

Diversified Technology, Inc. is providing customized rackmount platforms to a leader in development of tactical network management systems used within the military. The ruggedized PCI systems provide net-centric services through a transformational management system to enable Internet protocol-based networks of the future to operate efficiently with current C2 Tactical networks. Each transportable system is packaged with three individual slot card CPUs, DTI's **LBC9216**, that are based on the Intel® Pentium® 4 processor providing maximum performance in a ruggedized rackmount unit. The single board computer supplies the engine for a surveillance, reconnaissance and targeting solution used in by the three branches of the US armed forces.
